

## 1. Installation Instructions

### 1) Suspension Up and Down Round Track profile installation diagram (Figure 1)

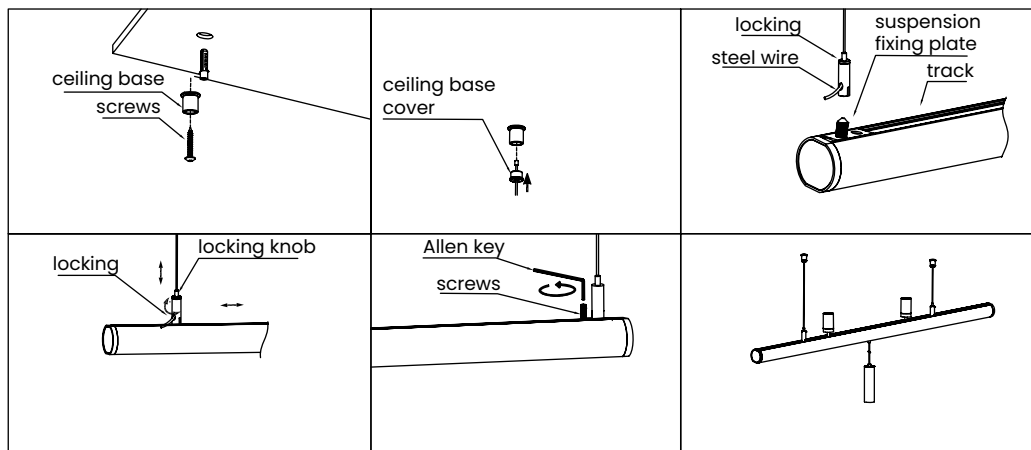

## 2. How to install the power connector

- 1) Connect the 24V constant voltage DC power supply to the input power connector using the wiring terminal. Then, connect the other end of the power supply to the 110V-240V mains power (Figure 2).
- 2) Once the wiring is connected, push the power connector fully into the track profile (Figure 3).

## 3. Installing the Suspended Up/Down Round Track Profile

- 1) Secure the ceiling suspension base using expansion screws and screws (Figure 4). Next, thread and secure the steel wire to the ceiling base (Figure 5).
- 2) Fasten the locking knob onto the track profile. Press the button on the locking knob to adjust the length of the steel wire through the side hole (Figures 6 and 7).
- 3) Adjust the left and right balance of the track profile by slightly loosening the locking knob, then re-tighten it to secure it in place (Figure 8).
- 4) Install the remaining suspension wire to complete the installation (Figure 9).
